PROFESSIONAL SUMMARY

Data Science undergraduate skilled in **Python, SQL, and Machine Learning** with hands-on experience building predictive and analytical models. Proficient in data preprocessing, feature engineering, visualization, and model optimization using tools like **Power BI and Tableau**. Driven to apply data-driven insights to solve real-world challenges and contribute to AI innovation in dynamic environments.

SKILLS

Programming: Python, Java

Data Analytics: SQL, MySQL, MS Excel, Power BI, Tableau

Machine Learning: scikit-learn, Random Forest, Decision Tree, SVM, Model Evaluation, Hyperparameter Tuning

Data Science Tools: Pandas, NumPy, Matplotlib, Seaborn

Other: Predictive Modeling, Statistical Analysis, Data Cleaning, EDA, Cross-Validation, API Integration, Git Version Control

INTERNSHIP EXPERIENCE

Data Annotator (TTS/STT) | OLA Krutrim AI, Bangalore | Mar 2025 – Aug 2025

- Transcribed and validated 500+ audio files ensuring phonetic and linguistic accuracy for Telugu and Indian-English datasets.
 - Corrected auto-generated transcriptions improving ASR model accuracy and reducing multilingual bias.
 - Performed waveform analysis, tagging, and manual annotation supporting AI model development.
 - Collaborated with specialists to maintain data integrity and contribute to Krutrim's mission in speech AI.
 - **Tools Used:** Python, Excel, Annotation Tools like Label Studio, Audio Analysis Software
-

PROJECTS

Patient Treatment Classifier – Medical Data Analysis Tool

- Reviewed and profiled patient records by checking for missing values, examining feature distributions, and summarizing key statistics to understand the dataset structure.
- Explored each clinical variable through histograms, KDE curves, boxplots, and count plots, helping identify patterns, distribution shapes, and class behavior between in-care and out-care patients.
- Used correlation heatmaps and feature-wise comparisons to uncover relationships between lab parameters and treatment outcomes, highlighting AGE, LEUCOCYTE, and HEMOGLOBINS as influential features.
- Examined outliers, assessed normality, and evaluated gender-based treatment patterns to better understand demographic influences.
- Refined the feature set by removing less informative variables (MCH, MCHC, MCV) based on EDA insights and encoded categorical features to prepare the data for modeling.

Tools Used: Python, Tableau, scikit-learn, MySQL, RandomizedSearchCV

Chinese Debt Trap Dataset

- Cleaned and standardized an 856-record international loan dataset, resolving missing values and converting loan amounts into a usable numeric format for accurate analysis.
- Performed detailed exploratory analysis using histograms, bar charts, line plots, and scatter plots to understand trends across Years, Countries, Sectors, Lenders, and Borrowers.
- Used correlation matrices and heatmaps to analyze how loan amounts relate to time, sector involvement, and sensitive territorial overlaps.
- Identified meaningful insights such as top debtor nations, high-risk sectors, and shifting yearly lending patterns, while documenting data gaps and inconsistencies.

Tools Used: Python, Numpy, Pandas, Matplotlib, Seaborn

CERTIFICATIONS & TRAINING

AI/ML and DBMS Training – Guvi | Oct–Dec 2023

- Implemented ML algorithms (Linear Regression, Logistic Regression, Naive Bayes) improving accuracy from 65% to 88%.
 - Designed and normalized SQL databases applied to preprocessing pipelines reducing redundancy by 25%.
-

EDUCATION

B.Tech in Computer Science | Lovely Professional University, Phagwara | Jul 2021 – Aug 2025

Relevant Coursework: Artificial Intelligence, Machine Learning | CGPA: 6.9/10

Higher Secondary | Narayana Junior College, Hyderabad | Jun 2019 – May 2021

Percentage: 90%
